SOVIET BORDER SECURITY FORCE INSTALLATIONS -- FAR EAST BORDER DISTRICT

1. This report is the second in a series planned to cover each of the five Soviet border security force districts that borders on China; the others are the Pacific Ocean[1], Transbaikal, Eastern, and Central Asian border districts. The sector of the boundary treated in this report, the Far East Border District, extends approximately 970 nautical miles (nm) from a point 6 nm north of Damanskiy Island on the Ussuri River to a point on the Amur River at approximately 53-26N 122-07E.

2. Eighty-two border security posts and 14 command installations of the Soviet border security force along the USSR - China boundary have been identified in the Far East Border District on KEYHOLE photography (Figure 1). These installations are listed in Table 1 in geographic order, from north to south.

3. The Far East Border District is unique in that its entire boundary with China is formed by the navigable waters of the Amur and Ussuri rivers. River guard units at Leninskoye (item 61, Figure 2), and at Kazakevichevo (item 67) form integral components of the border guard forces and are equipped with gunboats and patrol and liaison boats.

4. An increase in armored combat vehicles was noted at certain border guards installations after the 1969 skirmishes at Damanskiy Island. Large-scale photography revealed that this increase was mainly in BTR-60PB armored personnel carriers (APC), but at two installations, Iman Army Barracks South AL 9 (a border security installation in the Pacific Ocean Border District) and Bidzhan Military Installation NW (item H), this increase included tanks. The inclusion of tanks in the weapons inventory of the border forces would give the local border guard commander the strike force necessary to quell border incursions such as the Damanskiy Island clashes where armored support had to be called from local ground force units. A border guard armored force was observed at Bidzhan Military Installation NW
